

Your open marine display. One helm. Every platform.

Open-source · Touch-first · Signal K connected

Real FairWindSK interface: launcher, charts, instruments and vessel data.

About FairWindSK

FairWindSK is an open-source, touch-first marine Multi-Functional Display and Signal K application host. Its single-window shell brings instruments, vessel operations, data tools and embedded web applications together across desktop, Raspberry Pi, Android and iOS/iPadOS targets.

For boat owners, yacht clubs, makers, educators and marine researchers.

Built for the helm

One coherent display Live instruments, alarms, apps and vessel data stay inside a stable landscape workspace.	Touch-first operation Large targets, high contrast and comfort presets support use from dawn through night.
Open ecosystem Signal K connectivity and embedded web applications keep the platform adaptable.	Cross-platform Targets include Linux, Raspberry Pi OS, macOS, Windows, Android 13+ and iOS/iPadOS.
Operational tools Person Over Board, anchor, MyData and compatible autopilot access share the same shell.	Research ready A vessel-edge interface for data crowdsourcing, environmental observation and human-in-the-loop studies.

Explore, build and contribute

<https://github.com/OpenFairWind/FairWindSK>

FairWindSK supports onboard workflows; it does not replace certified navigation equipment, seamanship or emergency procedures.
